

# BCOBA Digital Hub — Team Guide

---

## BCOBA Digital Hub — Team Guide

---

**Purpose:** One shared system to plan, approve, adapt, publish, and track official BCOBA digital communications — across campaigns and channels — without buying a full Hootsuite/Metricool subscription.

**App (local):** `http://localhost:8787`

**Demo admin:** `admin@bcoba.lk / admin123`

---

### 1. What this Hub does

| Stage              | What the team does in Hub                                            |
|--------------------|----------------------------------------------------------------------|
| Connect            | Save platform credentials (Facebook Page, Instagram, LinkedIn)       |
| Create             | Write a master post (story, caption ideas, notes, tags)              |
| Adapt              | Adjust wording per channel (FB / IG / LinkedIn / WhatsApp / YouTube) |
| Approve            | Review → request changes → approve                                   |
| Schedule / Publish | Schedule for later, or publish now                                   |
| Engage             | Log comments/DMs and escalate if needed                              |
| Track              | See ops status + basic analytics                                     |

It is **BCOBA-wide** (not only Main Hall). Campaigns live under categories (e.g. Projects, Alumni, Sports). Main Hall is Campaign #1 under Projects.

---

### 2. How a post moves (simple flow)

```
Draft → Submitted → In review → Approved
                        ↓
                    Scheduled → Published
```

1. **Compose** a post
2. Click **Save as draft** (keep working, nothing goes live)  
or **Send to Digital Comms** (enters review queue)
3. Editor adapts channel packs in **Publisher**
4. Approver **Approves / Schedules / Auto-publishes**
5. Team checks live links + engagement

**Important:** Saving a draft or submitting for review does **not** post to Facebook/Instagram/etc. Live posting only happens when someone uses **Auto-publish, Schedule** (due time), or posts manually outside Hub.

---

### 3. Channels — what works today

| Channel                    | In Hub today     | How publishing works                                                             |
|----------------------------|------------------|----------------------------------------------------------------------------------|
| Facebook Page              | Yes              | Auto-post via saved Page connection (tested)                                     |
| Instagram                  | Partial          | Needs IG Professional account linked to the FB Page + image; setup pending       |
| LinkedIn                   | Partial          | Needs LinkedIn app token + person/org URN                                        |
| WhatsApp                   | Manual pack      | Copy message from Publisher → paste in WhatsApp Business / Community / Broadcast |
| YouTube                    | Credentials only | Full upload later                                                                |
| Facebook / Instagram Reels | Not yet          | Planned                                                                          |
| TikTok                     | Not yet          | Planned                                                                          |

#### Facebook (ready)

- Connect a **Facebook Page** (not a personal profile) under **Connections**
- Paste Page ID + access token (or user token; Hub resolves Page token)
- Use **Quick post** to test, or **Publisher → Auto-publish**

#### WhatsApp (manual by design)

WhatsApp Business app does not offer simple Community/Broadcast auto-post like Facebook. Hub prepares the message; Channel Admin copies and sends.

---

## 4. Main screens (where to click)

| Menu             | Use for                                                      |
|------------------|--------------------------------------------------------------|
| Compose          | New draft / new submission                                   |
| Queue            | See all posts by status (filter <b>draft</b> )               |
| Publisher        | Edit master + channel packs, approve, schedule, auto-publish |
| Calendar         | Month view of scheduled/published items                      |
| Campaigns        | Categories and campaigns                                     |
| Media            | Upload images/files for posts                                |
| Post templates   | Branded PNG templates                                        |
| Process diagrams | Draw/export process maps                                     |
| Brand guide      | Brand rules reference                                        |
| Engagement       | Log replies / escalations                                    |
| Analytics        | Ops + tag / platform summaries                               |
| Connections      | Platform tokens + Facebook Quick post                        |

## 5. Roles (who does what)

| Role          | Typical rights                        |
|---------------|---------------------------------------|
| Contributor   | Create drafts / submit stories        |
| Editor        | Adapt channel packs, mark in review   |
| Approver      | Approve, schedule, publish            |
| Channel Admin | WhatsApp/send packs, engagement       |
| Admin         | Full access + connections + seed data |

## 6. Draft vs live (for the team)

| Action        | Goes live on social? |
|---------------|----------------------|
| Save as draft | No                   |

| Action                              | Goes live on social? |
|-------------------------------------|----------------------|
| Send to Digital Comms               | No                   |
| Approve only                        | No                   |
| Schedule (future time)              | Yes, when due        |
| Auto-publish now                    | Yes                  |
| Connections → Quick post (Facebook) | Yes, immediately     |

Use **drafts** to prepare content offline from social. Publish only when the team is ready.

---

## 7. Connections & tokens (ops note)

- Facebook / Instagram use **Meta** (same developer app family)
  - LinkedIn needs a **separate LinkedIn app**
  - Explorer tokens are often short-lived (hours). For ongoing use, exchange to a long-lived Page token
  - Personal Facebook profiles **cannot** be auto-posted; only **Pages**
  - Official PPA Page example: <https://www.facebook.com/BandaranayakeCollege.PPA> (admin access required before connecting)
- 

## 8. Roadmap — requested next

### A. Reels (Facebook + Instagram)

- Add **Reels** as a publish format (short vertical video)
- Upload/select video in Media
- Caption + cover + channel targeting
- Publish to FB Reels / IG Reels where API allows
- Keep feed posts and Reels as separate channel packs

### B. TikTok

- Add **TikTok** as a channel
- Connect TikTok Business / Content Posting API
- Draft → approve → publish short video + caption
- Basic analytics sync later

### C. Other follow-ups

- Instagram feed auto-post hardening (Professional account linked to Page)

- LinkedIn Company Page posting
  - Long-lived token helper in Connections
  - Optional WhatsApp Cloud API (only if BCOBA needs true auto-broadcast)
- 

## 9. Suggested team operating rhythm

1. Contributors add stories as **drafts** during the week
  2. Digital Comms reviews in **Queue** twice weekly
  3. Approver sets **Schedule** on the calendar
  4. Channel Admin handles **WhatsApp** copy/send at the scheduled time
  5. Engagement owner checks comments/DMs and logs in **Engagement**
  6. Monthly: review **Analytics** by campaign/hashtag
- 

## 10. One-line summary for stakeholders

BCOBA Digital Hub is our shared content desk: draft → approve → multi-channel publish → engage → measure — starting with Facebook Page auto-post, WhatsApp manual packs, and Reels + TikTok next.
